Management Features

- Equinet V5 operating system admin interface with enhanced users reports
- Simple set-up and configuration
- Management reporting
- Remote support and online upgrades
- Multi-Language web based management interface
- In-built disk back-up capabilities

SUMMARY

NetPilot *Lite* enables organisations to easily and securely deploy secure Internet based IPsec VPNs, Internet access and email facilities. It integrates key communications, networking and server elements into a single 'Secure Internet Appliance'.

Server features include web and email servers, as well as file, DHCP, DNS and FTP server functionality - all built-in.

NetPilot *Lite* is ideal for small sized organisations, or as a VPN node at a small branch office.

NetPilot *Lite* is supplied in an attractive and compact case. It has a

high quality internal power supply unit and mechanical assemblies.

LITEUTM - UNIFIED THREAT MANAGEMENT

NetPilot reduces complexity and protects users from multiple internally and externally generated threats by combining multiple protection measures into a single appliance.

To provide complete peace of mind, NetPilot *Lite* comes with 12 months subscription to LiteUTM Unified Threat Management.

Email protection includes: anti-virus, anti-spam, email policy controls. The URL filtering option provides best of breed content filtering capabilities.

Anti-virus capabilities provide gateway anti-virus scanning of all incoming, outgoing and internal emails.

Anti-spam facilities ensure your staff are not inundated with useless and time consuming emails.

Email policy controls give the administrator even greater scope to create more extensive rules to deal with email – customized to your organisation's needs.

FIREWALL SECURITY

NetPilot *Lite* offers a complete security and control that is powerful yet easy to administer.

Facilities include not only a powerful accredited firewall, but also user access control, web access control, web filters and time-based connectivity control.

NetPilot *Lite*'s firewall has undergone rigorous independent testing and has been awarded Checkmark accreditation.

CONTROLLED HIGH SPEED WEB ACCESS

NetPilot *Lite* enables multi-user Internet access through a range of high-speed communications options. It has powerful yet flexible control facilities to administer local access of external resources, including user restrictions, web access control, web filters and time controls. Some groups or individuals may have rights assigned to use only email, or just web browsing. Which web sites are accessed by which users can be controlled – ranging from a very restricted set of web addresses with no general browsing capability, to fairly widespread rights, with perhaps the exception of pornographic sites.

TOTAL EMAIL SOLUTION

NetPilot *Lite* can act as a company-wide internal and external email server. For complete flexibility, it can also be as a secure front-end gateway to another internal mail server, such as Microsoft Exchange.

WEB PAGE CACHING

To speed up user access, Equinet has introduced caching. This allows popular web sites, pages or parts of pages to be stored locally in NetPilot *Lite* and to be viewed subsequently by other users without reconnecting to the Internet, unless the content has changed.

VPN CONNECTIVITY

NetPilot *Lite*, with its accredited Virtual Private Network (VPN) functionality, uses either standard IPsec protocols with 3DES encryption, or OpenVPN with SSL encryption, to form part of an Internet based VPN.

Secure VPN tunnels across the Internet can interconnect NetPilots at differing office locations.

In addition, roving sales or support personnel, or home office connect to their central office and share files and emails. NetPilot *Lite* users can make use of unlimited numbers of OpenVPN SSL clients for remote access.

EASY TO INSTALL

NetPilot *Lite* is very straightforward to install and extremely easy to use. The network administrator is provided with a 'Quick Configuration' mechanisms which are accessed through a browser interface, enabling online connectivity within minutes.

ONGOING MANAGEMENT

NetPilot *Lite* monitors and reports on a range of activities including online time, the number of incoming and outgoing emails by user, web usage by time of day and firewall rejects. These reports can be automatically collated and sent as a daily email to a system supervisor.

UPGRADES AND SUPPORT

Subscription to LiteUTM means software updates can be automatically downloaded from the NetPilot upgrade service site. Support staff can check the operation of NetPilot *Lite* remotely and make online changes if necessary.

OTHER NETPILOT MODELS

NetPilot *Lite* is a member of a family of products. NetPilot Plus is aimed at medium-sized organisations with up to 100 PCs. NetPilot Enterprise products are for larger applications needing secure and resilient Internet access.
